The original language of this manual is English.

Product Safety Information:

Intended Use:

This drill shall be used only for removing material by using appropriate drill bits as the cutting tool.

For additional product safety information refer to Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG document CE-2006, General Safety Portable Drills.

This drill must not be modified in any manner unless approved in writing by Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG. All safety devices must be properly installed and maintained in good working order.

EC Declaration of Conformity:

We affirm that this machine is in accordance with the following EC regulations (2006/42/EC). Applied harmonized standards are ISO 12100:2010-11.

The name, job function and address of the person authorized to compile the technical file.

Mr. Vishnu Irigireddy
 Director of Global R&D- Mechanical Engineering
 Apex Tool Group
 670 Industrial Drive
 Lexington, SC 29072

Signature: Vishnu Irigireddy
 Date: 12/08/2015

Noise and Vibration:

Noise: ≤ 84 dB(A)

Vibration: < 2.5 m/s²

Air Line Lubrication:

Use Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG's lightweight air tool oil 500021 (available in quantities shown in the following chart) or an SAE-5 lightweight spindle oil.

Part No.	Packaged	Designation
540397	1 Quart (0.94 liter)	Airlube 10W/NR-420LB DR
533485	1 US Gallon (3.78 liter)	Airlube 10W/NR-420LB DR

Grease:

Application of the screwdriver should determine how frequently it is greased. It is recommended that all gearing receive a generous amount of grease after every 40 hours of operation.

Part No.	Packaged	Designation
540450	18 oz. (0.51 kg)	Black Pearl EP-NLGI-0
540395	2 oz. (0.06 kg)	Magnalube-G
513156	16 oz. (0.45 kg)	Magnalube-G
541444	2 oz. (0.06 kg)	Rheolube 363AX-1
541445	16 oz. (0.45 kg)	Rheolube 363AX-1

The clutch housing and clutch assembly must be removed and the grease applied through the hex in the gear carrier.

Air Supply Line:

Parameter	Description
Air Hose	Minimum inside diameter: 1/4" (6.4 mm) Maximum length: 8' (2.5 m)
Working pressure range	Performance rated at: 90 psi (620 kPa)
Compressed air	Air quality according to ISO 8573-1, quality class 2.4.3 The compressed air must be clean and dry.

Service and Repair:

Tool service and repair should be performed by an authorized Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG Center. Refer to the last page of this manual for locations.

Disposal:

Observe local disposal guidelines for all components of this tool and its packaging.

Copyright Protection:

Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG reserves the right to modify, supplement or improve this document or the product without prior notice. This document may not be reproduced in any way, shape or form, in full or parts thereof, or copied to another natural or machine readable language or to a data carrier, whether electronic, mechanical, optical or otherwise without the express permission of Apex Tool Group, LLC or Apex Tool Group GmbH & Co. OHG

Operation:

The drill is started by depressing the trigger and is stopped by releasing the trigger.

Speed Adjustment:

Speed adjustment is done by depressing the indexing blade, on the side of the tool, and rotating the speed adjustment cap to the desired RPM setting.

Governor Valve Bushing:

If the governor valve bushing (863993), located in the handle, requires replacement press it out the front of the handle.

Coat the new bushing with Locktite® 271 and press flush with the rear of the handle. **Note: The new bushing must be honed to .6875"/.6880" (17.4625mm/17.4752mm) after being installed.**

Motor Service:

If motor disassembly was necessary, clean all parts in a solvent and inspect for excessive wear or damage. It is recommended that all o-rings and seals be replaced each time the tool is disassembled. Replace as necessary with genuine Cleco replacement parts.

The rotor blades should be replaced every repair cycle or if they measure less than 5/32" (4mm) on either end.

All gears, gear pins, and open bearings should receive a generous amount of grease before reassembly.

Motor Assembly:

To properly set the rotor collar, assemble the rear rotor bearing into the rear bearing plate. Hold the inner race of the bearing forward and measure the depth of the inner race from the face of the bearing plate. Select a rotor collar (or sand) .0015" larger than this dimension.

Assemble the collar, rotor bearing, bearing plate and governor assembly (LH Thread) to the rotor. The clearance between the rear bearing plate and rotor should be .001" (.0254mm) after tightening the governor.

After final assembly, make sure the rotor does not rub the front bearing plate.

Gearing Service:

If replacement of the planetary gear pins is necessary, they should be pressed out the rear of the gear carrier.

Install the new planetary gear pins as shown in the following illustrations.

Single Reduction Gearing (code -28)
